COMMENT “PRICING” GUIDE

Quote guess mat karo, pehle rehearse karo

Client ke 50 AI clones ke saath price test karo: Upwork MCP + GPT Researcher + MiroFish setup, aur bina kisi tool ke Claude-only version bhi.

Tumne “PRICING” comment kiya tha, ye rahi guide 🎁 · @aiwith.om · Oct 2026

Idea kya hai?

Price bolne se pehle client ki duniya ko simulate karo: founder, CFO, marketing head ke AI personas banao aur 3 prices pe unka reaction dekho. Ye **prediction nahi, rehearsal** hai, lekin guess se behtar.

Full setup (3 tools)

1

Upwork MCP: job post padho

Claude ko Upwork se jodo taaki wo job post, budget, client history aur hire rate padh sake. Upwork ka official MCP/connector ya community `upwork-mcp` package. **Install se pehle Upwork ki site pe official option confirm karo** aur kisi third-party ko apna account dene se pehle code/permissions check karo.

```
# community package (check before use):
claude mcp add --transport stdio upwork -- uvx upwork-mcp
```

2

GPT Researcher: client ki research

Open-source research agent: website, competitors, budget signals ki report banata hai.

```
pip install gpt-researcher
# needs: OPENAI_API_KEY (or another LLM) + TAVILY_API_KEY (web search)
```

GPT Researcher
github.com/assafelovic/gpt-researcher

3

MiroFish: personas + simulation

Research report upload karo → MiroFish knowledge graph banata hai → har insaan ka AI persona → simulation. Docker/Node + Python chahiye.

```
git clone https://github.com/666ghj/MiroFish && cd MiroFish
cp .env.example .env   # LLM_API_KEY + ZEP_API_KEY (Zep free quota)
npm run setup:all
```

MiroFish (AGPL-3.0)
github.com/666ghj/MiroFish

⚠️ **Kharcha:** tools free/open-source hain, lekin LLM API usage paid hai. MiroFish khud bolta hai "high consumption": pehle chhote simulations (40 rounds se kam) chalao.

Shortcut: sirf Claude se (5 minute)

Tools setup nahi karna? Ye 3 prompts Claude mein chalao. Same idea, zero setup.

01 Client research brief

COPY ⧉

```
Ye ek Upwork job post hai: [PASTE JOB POST]
Client ki profile: [hire rate, total spent, reviews, country]
Client ki website: [URL]

Ek research brief banao: business kya karta hai, unka size, is project ki urgency, budget signals (job post + history se), aur unke 3 competitors kya charge karte honge. Jo pakka nahi pata use "assumption" likho.
```

02 Stakeholder personas

COPY ⧉

```
Is brief se 3 personas banao jo ye decision lenge: Founder, CFO/finance, aur jo kaam use karega (marketing head / ops). Har ek ke liye: priority, darr, budget ka nazariya, aur kya sunke "haan" bolega.
```

03 Price rehearsal

COPY ⧉

```
Ab main 3 quotes rakhta hoon: ₹[LOW], ₹[MID], ₹[HIGH], scope: [SCOPE].
Har persona ke roop mein har price pe honestly react karo (1-2 lines), phir: kaunsa price sabse zyada "haan" layega, kya objections aayenge, aur har objection ka ek jawab. Last mein mujhe best price + proposal ki pehli line do.
```

Rules

- Client ka **private data** (contracts, internal docs) kisi tool mein mat daalo. Sirf public info + job post.
- Result ko "sach" mat maano. Ye tumhare quote ko sochne ka tarika hai.
- Price ke saath **scope** clear likho; sasta quote + unclear scope = loss.

Aur aise free AI tools chahiye?
