COMMENT “PROMPTS” GUIDE

12 landing page animations, 12 prompts

Har animation Claude ek prompt se banata hai. Copy-paste karo, brackets bharo, done.

Tumne “PROMPTS” comment kiya tha, ye rahi guide 🎁 · @aiwith.om · Oct 2026

Kaise use karein

Har prompt Claude (claude.ai ya Claude Code) mein paste karo. Pehle ye **base line** har prompt ke end mein jodo, aur `[BRACKETS]` apni details se bharo:

```
Single self-contained HTML file (inline CSS + vanilla JS, no libraries). Mobile-first, smooth 60fps (only transform/opacity), respects prefers-reduced-motion, accessible text. Use my brand colors: [PRIMARY], [ACCENT], background [BG]. Font: [FONT].
```

💡 Claude.ai mein result Artifact/preview mein turant dikh jayega. Pasand aaye to "Isko mere existing page mein daalne ka code do: [framework, jaise Webflow / WordPress / React]" bolo.

01 Hero reveal

COPY ⧉

```
Build a landing page hero where the headline "[HEADLINE]" reveals word by word (each word slides up 20px + fades in, 80ms stagger), then the subheadline fades in, then the CTA button pops in with a soft bounce. Total under 1.5s.

[+ BASE LINE]
```

02 Word rotator

COPY ⧉

```
Build a headline "We help you [ROTATING]" where the last part cycles through: "[PROMISE 1]", "[PROMISE 2]", "[PROMISE 3]", "[PROMISE 4]" every 2.2s with a vertical slide + blur transition. Width animates smoothly so the line never jumps.

[+ BASE LINE]
```

03 Sale pings

COPY ⧉

```
Build a small social-proof toast in the bottom-left that shows "[Name] from [City] just bought [Product]" with time ago. New toast every 6–9s (random), slides in, stays 4s, slides out. Use a JSON array of 10 sample entries I can edit. Close button hides them for the session.

[+ BASE LINE]
```

04 Review shuffle

COPY ⧉

```
Build a testimonial section with 5 review cards stacked like a deck. Every 3.5s the top card flies to the back with a slight rotation and the next comes forward. Swipe/drag on mobile to shuffle manually. Each card: avatar initial, name, 5 stars, 2-line quote.

[+ BASE LINE]
```

05 Count-up stats

COPY

Build a stats row with 3-4 numbers ([NUMBER 1] [LABEL 1], ...). When the row scrolls into view (IntersectionObserver), each number counts up from 0 with ease-out over 1.6s, with comma formatting and optional suffix (+, %, K).

[+ BASE LINE]

06 Bento build

COPY

Build a features bento grid (6 tiles, mixed sizes) that assembles on scroll: tiles start scattered/offset and snap into place with a staggered spring. Each tile: icon, title, one line. Hover on desktop lifts the tile.

[+ BASE LINE]

07 Cursor tour

COPY

Build a fake product demo: a styled mock UI (sidebar, list, button) and an animated cursor that moves to a button, clicks (ripple), a panel opens, cursor types into a field, then a success state. Loops every 8s. No screen recording, pure HTML/CSS/JS.

[+ BASE LINE]

08 Process draw

COPY

Build a "How it works" section with 4 steps vertically. An SVG line draws itself from step 1 to step 4 as the user scrolls (stroke-dashoffset tied to scroll progress); each step's dot and text light up when the line reaches it.

[+ BASE LINE]

09 Before / after

COPY

Build a before/after image comparison slider: two stacked images, a draggable vertical handle (mouse + touch + keyboard arrows) that reveals the "after" image. Labels "Before" and "After" in the corners. Starts with a small auto-wiggle hint.

[+ BASE LINE]

10 Price roll

COPY

Build a pricing section with a Monthly / Yearly toggle. When toggled, each price rolls like an odometer (digits slide vertically) to the new value, and a "Save [X]%" badge pops in for yearly. 3 plans: [PLAN DETAILS].

[+ BASE LINE]

11 Us vs them

COPY

```
Build a comparison table "Us vs Others" with 6 rows. On scroll into view, the rows reveal one by one: others column gets a red × that shakes slightly, our column gets a green ✓ that pops. Our column is highlighted with a glow.

[+ BASE LINE]
```

12 Click → success

COPY

```
Build a final CTA button "[CTA TEXT]". On click: button morphs into a spinner circle, then into a green check, then confetti bursts (canvas, 80 particles, 1.2s) and text "[SUCCESS MESSAGE]" appears. Works with keyboard (Enter/Space).

[+ BASE LINE]
```

Rules

- **Saari 12 ek page pe mat daalo.** Page slow hoga. 2–3 chuno: hero + social proof + CTA se shuru karo.
- Mobile pe test karo (Chrome DevTools → device mode + real phone).
- PageSpeed Insights se speed check karo; animation ke baad bhi score theek rehna chahiye.
- "Reduced motion" setting wale users ke liye animations off/soft honi chahiye (base line mein already hai).
