aiwith.om

THE PIPELINE GUIDE

10 free GitHub repos for clients

bina ads ke. Client dhoondho → lead samjho → message bhejo → deal close karo.

Comment **PIPELINE** pe bheja gaya · @aiwith.om · Oct 2026

Start yahan se

Dason ek saath install mat karo. Apni situation dekho aur sirf 2 se shuru karo:

Local business ko bechte ho?

`02 Google Maps Scraper`
`10 DeskComm CRM`

City ke businesses ki list → WhatsApp pe follow-up aur close.

Online product / SaaS hai?

`01 Customer Finder`
`08 Warmbly`

Jo log problem bata rahe hain unhe dhoondho → email sequences.

Pura pipeline, 4 stages

01 — Client dhoondho
Customer Finder · Google Maps Scraper · Scout · YC Outreach

02 — Lead samjho
Goose Skills · Growth Engineer

03 — Message bhejo
Cold Outbound Skills · Warmbly · OneShot GTM

04 — Deal close karo
DeskComm CRM

"Free" ka sach

- `100% FREE` chalao apne computer pe, koi bill nahi.
- `FREE + APNE KEYS/HOSTING` software free, lekin API keys, server ya AI usage ka kharcha tumhara.
- `CODE FREE, USAGE PAID` open source, par actions per-call billed.

Sab repos open source hain (MIT / Apache-2.0). Maine har repo ka README padh ke setup likha hai (Oct 2026). Repos update hote rehte hain, to install se pehle README ek baar check karna.

01

STAGE 01 · FIND

Customer Finder

github.com/Kappaemme-git/codex-first-customer-finder-skill MIT

FREE + APNE KEYS/HOSTING

Tumhara product URL do. Ye skill internet pe un logon ko dhoondhti hai jo publicly wahi problem bata rahe hain jo tumhara product solve karta hai (X posts, GitHub issues, forums, reviews). Har prospect ke saath proof link, score, contact route aur ek short draft message milta hai.

Best for: SaaS, apps, online products: pehle 10–20 customers

```
npx --yes codex-first-customer-finder-skill@latest
# Codex mein:
Use $first-customer-finder to find 5 potential customers for [PRODUCT URL].
```

Kharcha: Skill free hai. Ye OpenAI Codex ke liye bani hai (Claude Code nahi), to Codex access chahiye. Node.js + Python 3.9+.

⚠️ Ye "potential" customers hain, confirmed buyers nahi. Outreach khud kabhi nahi bhejta: message tum manually bhejoge.

02

STAGE 01 · FIND

Google Maps Scraper

github.com/Mahanaicoach/google-maps-scraper-kit MIT

100% FREE

Business type + city likho ("dentists in Pune"). Ye Google Maps se outreach-ready CSV banata hai: name, phone, email, website, category, address, rating, review count. --socials se Instagram, Facebook, LinkedIn bhi.

Best for: Local businesses ko service bechne wale: agencies, web designers, freelancers

```
git clone https://github.com/Mahanaicoach/google-maps-scraper-kit.git
cd google-maps-scraper-kit && docker compose up -d
python3 scripts/scrape.py "dentists in Pune" --city "Pune, India" --depth 5 --socials
```

Kharcha: 100% local, no API keys, no credits. Docker Desktop chahiye. Claude Code mein folder kholo (claude) to skill khud load hoti hai.

⚠️ Scraping ki limits hoti hain: repo ka "Honest limits" section padho, slow chalao, aur sirf relevant businesses ko contact karo.

03

STAGE 01 · FIND

Scout

github.com/kiryano/Scout MIT

100% FREE

Creators aur social profiles se leads: Instagram, TikTok, YouTube, LinkedIn, GitHub, Twitch, Pinterest, Linktree. Emails ko SMTP se verify karta hai, lead score (0–100) deta hai, CSV export.

Best for: Creators, coaches, influencers ko target karne wale (appointment setters, editors, agencies)

```
git clone https://github.com/kiryano/Scout.git && cd Scout
pip install -r requirements.txt && cp .env.example .env
python scout.py
```

Kharcha: Free CLI, Python 3.10+. Proxies optional.

⚠️ LinkedIn ke liye tumhari login cookie lagti hai, jo LinkedIn ke rules ke against ho sakta hai aur account restrict ho sakta hai. Early-access tool hai.

04

STAGE 01 · FIND

YC Outreach

github.com/adityajha2005/yc-outreach MIT

100% FREE

Koi bhi Y Combinator batch chuno. Har company ke founders, unke LinkedIn/X, open roles aur likely email addresses milte hain. Ek template likho, har founder ke liye personalised draft ban jata hai.

Best for: B2B services/SaaS jo startups ko bechte hain (dev agencies, designers, recruiters)

```
git clone https://github.com/adityajha2005/yc-outreach.git && cd yc-outreach
python3 serve.py
# browser: http://localhost:8765
```

Kharcha: Free, no sign-up, no API key. Verified emails ke liye optional Apify token (paid).

⚠️ Bina Apify ke emails "guess" hote hain (first guess ~80% sahi). Bounce se bachne ke liye pehle verify karo.

05

STAGE 02 · RESEARCH

Goose Skills

github.com/gooseworks-ai/goose-skills MIT

FREE + APNE KEYS/HOSTING

200+ ready-made AI skills: customer & competitor research, comment mining, audience research, campaigns. Claude Code / Cursor / Codex mein install hota hai, phir bas /gooseworks se kaam bolo.

Best for: Har lead ya market ki deep research AI se karwani ho

```
# Claude Code mein paste karo:
Install gooseworks: https://gooseworks.ai/install.md
# ya terminal: npx gooseworks@latest install --claude --mcp
```

Kharcha: Skills free (MIT). Install ke time GooseWorks pe Google sign-in hota hai; kuch features unke account/credits pe chal sakte hain. Pricing check karo.

⚠️ Install karne se pehle agent tumse permission maangta hai: padh ke "yes" bolo.

06

STAGE 02 · RESEARCH

Growth Engineer

github.com/GetBrew/growth-engineer MIT

FREE + APNE KEYS/HOSTING

Go-to-market workflows ka open catalog: har workflow ek markdown file hai jo koi bhi AI agent chala sakta hai (jaise funding-signal outbound). Agent ko batata hai kaunsa tool, kaunsa step, aur message bhejne/paise kharch karne se pehle poochhta hai.

Best for: Ready prospecting playbooks chahiye, khud se design nahi karna

```
claude mcp add --transport http growth-engineer --scope user https://www.growth.engineer/mcp
# Claude app: Settings → Connectors → Add custom connector → same URL
```

Kharcha: Catalog + MCP free, no sign-in. Workflows jo tools use karte hain (Apollo jaise) unke apne paid plans ho sakte hain.

⚠️ Ye "recipes" hain: actual data tools ke keys tumhe khud lagane honge.

07

STAGE 03 · OUTREACH

Cold Outbound Skills

github.com/growthenginenowoslawski/coldoutboundskills MIT

FREE + APNE KEYS/HOSTING

32 Claude Code skills poore cold-email system ke liye: ICP, lead magnet, campaign strategy, copywriting, domain + inbox setup, deliverability audit, list building, spam-word checker, weekly rhythm. Bundled lists bhi (Shopify stores, US businesses).

Best for: Serious cold email campaign zero se chalana

```
git clone https://github.com/growthenginenowoslawski/coldoutboundskills.git
cd coldoutboundskills && claude
/cold-email-kickoff
```

Kharcha: Skills free. "Bring your own API keys": Smartlead, Prospeo, Clay, Zapmail jaise paid tools ke saath best chalta hai.

⚠️ Starting point hamesha /cold-email-kickoff. Domains + warmup ke bina mat bhejo.

08

STAGE 03 · OUTREACH

Warmbly

github.com/warmbly/warmbly Apache-2.0

100% FREE

Open-source cold email + warmup platform: multi-step sequences, saare mailboxes ka unified inbox, built-in CRM, warmup pool, bounces/complaints tracking, AI reply playbooks. Tumhare apne server pe.

Best for: Apne mailboxes se campaigns chalana aur replies ek jagah manage karna

```
git clone https://github.com/warmbly/warmbly && cd warmbly
make dev   # local try: http://localhost:5173
# Production: docs.warmbly.com ka self-hosting guide
```

Kharcha: Software free, self-host. Docker, Go 1.25, pnpm chahiye; production ke liye server.

⚠️ Technical setup hai. Non-coder ho to Claude Code se step-by-step karwao.

09

STAGE 03 · OUTREACH

OneShot GTM

github.com/oneshot-agent/oneshot-gtm MIT

CODE FREE, USAGE PAID

Founders ke liye outbound: launches, funding, job changes jaise signals pe log dhoondhta hai, tum approve karte ho, ye research karke tumhari voice mein message likhta hai, follow-up cadence chalata hai. Reply aate hi ruk jata hai.

Best for: Early-stage founders jinke paas abhi product-market fit nahi

```
curl -fsSL https://bun.sh/install | bash
git clone https://github.com/oneshot-agent/oneshot-gtm && cd oneshot-gtm && bun install
bun run cli -- init && bun run cli -- ui   # http://127.0.0.1:3030
```

Kharcha: Code free hai, lekin research/enrichment/email/LinkedIn actions OneShot ke through per-call billed hote hain.

⚠️ Built-in safety: naya mailbox 10 emails/day se start, har hafte +10, max 50. Ye achhi baat hai, jaldi mat karo.

10

STAGE 04 · CLOSE

DeskComm CRM

github.com/melgarafael/DeskcommCRM MIT

FREE + APNE KEYS/HOSTING

WhatsApp ke liye open-source AI Sales OS: AI agents jo WhatsApp pe answer, qualify aur sell karte hain, CRM ke andar, tumhare apne server pe. Lead se deal tak sab WhatsApp pe.

Best for: Jinke leads WhatsApp pe aate hain: local business, coaches, D2C

```
# VPS pe (4 GB RAM recommended):
git clone https://github.com/melgarafael/DeskcommCRM.git && cd DeskcommCRM
bash hostgator-setup-kit/install.sh
```

Kharcha: Software free. Chahiye: VPS (~monthly), domain, free Supabase account, aur AI key (OpenRouter/Anthropic/OpenAI usage paid).

⚠️ WhatsApp do tarah se judta hai: QR code (unofficial, ban risk) ya Meta ka official Cloud API (safe, recommended). Docs zyada Portuguese mein hain.

Cold email safety checklist

Ye skip kiya to sab seedha spam mein jayega, aur domain bhi kharab hoga.

1. **Alag domain lo** outreach ke liye (main domain pe risk mat lo).
2. **SPF, DKIM, DMARC** set karo. Cold Outbound Skills ka email-deliverability-audit check karta hai.
3. **Warm-up 2–3 hafte** pehle. Warmbly / inbox warmup tools use karo.
4. **Slow start:** 10 emails/day per inbox, har hafte thoda badhao, max ~50.
5. **Emails verify karo** bhejne se pehle. Guess wale emails bounce karte hain.
6. **Short + personal:** pehle message mein meeting mat maango. Ek useful baat + ek simple sawaal.
7. **Unsubscribe / opt-out** ka option do aur "no" ki respect karo.
8. **Spam words** check karo (spam-word-checker skill).
9. **Local laws follow karo** (jaise GDPR, CAN-SPAM) agar un countries mein bhej rahe ho.
10. **WhatsApp pe:** sirf opt-in logon ko message, aur official Cloud API prefer karo.

Aur aise free AI tools chahiye?
